

Parallels® DaaS

A next-gen DaaS Solution designed to enhance the capabilities and scalability of cloud-based IT environments.

Parallels® DaaS is a cloud-native, Desktop-as-a-Service (DaaS) solution that offers users secure, instant access to their virtual applications and desktops.

Parallels DaaS can enhance the capabilities of existing cloud environments with its unique architecture that bolsters security and enhances functionality. Additionally, it strips away the administrative complexity of deploying, configuring, and maintaining a cloud environment while offering an fantastic user experience from any device with a modern HTML5-based web-browser.

Quick, easy onboarding and management

Fast and effective onboarding, removing the complexity surrounding user deployment, and user profile management with a readily available service.

Uncomplicated cloud-native architecture

Built in the cloud, Parallels DaaS offers a more agile, cost-effective, and resilient solution by providing access points closer to where data and users reside.

Fast and efficient resource scaling

Easily scale your desktop infrastructure up or down to meet changing demands and optimize costs. All app and desktops are delivered with an excellent UX.

Upleveled security and compliance

Our distinctive architecture isolates the control and data layers, with our gateway service in your environment. Parallels DaaS controls access while your data stays securely with you.

Simplified Parallels DaaS setup

Completed in just four straightforward steps!

01

Register an account and access Parallels DaaS.

02

Connect your Microsoft Azure subscription to host resources.

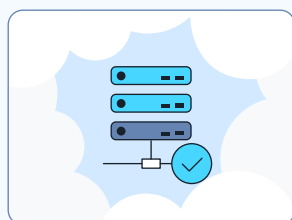

03

Install your line of business applications and settings.

04

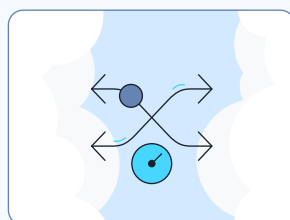

Invite users to access their apps, desktops, and data.

Parallels DaaS is a fit-for-task solution that addresses a variety of key use cases

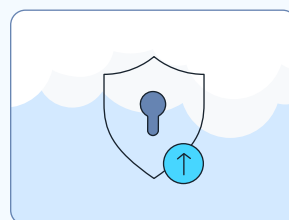

Adopting a cloud-first approach

Businesses are adopting cloud solutions to develop their IT environments while reducing the need for on-site infrastructure, IT personnel, and maintenance.

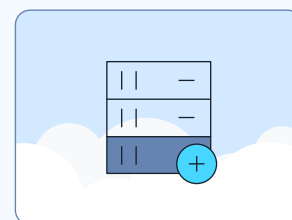

Move RDS and VDI environments to the cloud

Organizations currently utilizing on-premises virtual Apps, Desktops, and VDI solutions, and exploring digital transformation through cloud services.

Upgrade existing DaaS offerings

Replace existing DaaS environments with upleveled security functionality, flexible scaling, and better cost predictability to help with cost management.

IT Environment without IT Specialists

IT managers can deliver simple but powerful remote desktop deployments and manage it without the assistance of IT specialists.
